Ordinary glass is green with envy.

**Skylite Glazings**

**Starphire® Ultra-Clear Glass** by PPG adds an entirely new dimension to skylite and atrium glazing. Regardless of the overall thickness of the skylite glazing configuration, **Starphire** glass is “clearly” superior to ordinary clear glass in brightness, clarity, transmitted color integrity, and visual excitement. When your design calls for maximized transmission of undistorted natural light, **Starphire** glass has no equal. From art galleries to convention centers to corporate offices to shopping malls, when you want to bring the beauty and brightness of the outdoors into your interior design, skylites of **Starphire** glass are “clearly” remarkable:

- **Maximized transparency:** 7% higher Visible Light Transmittance than clear glass in a typical skylite glazing configuration
- **Undistorted transmitted color** – no “greening” of ordinary clear glass, especially when combined with common screen-printed designs (e.g., holes or dot patterns)
- **Adds sparkle and brilliance to interiors**
- **Easily fabricated to required specifications**

**Starphire** glass can be combined with solar control, low-e coatings to satisfy energy requirements while maintaining its ultra-clear visual character.

**Starphire** glass is available in thicknesses from 2.5 mm to 19 mm and is stocked regionally to assure consistent supply reliability. For **Starphire** glass samples or a list of distributors, contact our Solutions Hotline at **1-888-PPG-IDEA**, or visit [www.ppgstarphire.com](http://www.ppgstarphire.com).

All PPG architectural glass is **Cradle to Cradle Certified™**

**PPG IdeaScapes®** Integrated products, people and services to inspire your design and color vision.

Note: **Starphire** glass edge color can vary depending on final glass size, glass thickness, and ambient lighting conditions. PPG recommends a full-size **Starphire** glass viewing to determine acceptability for final use.
